

# EcoH2O

## Unleashing the REAL Power of Water

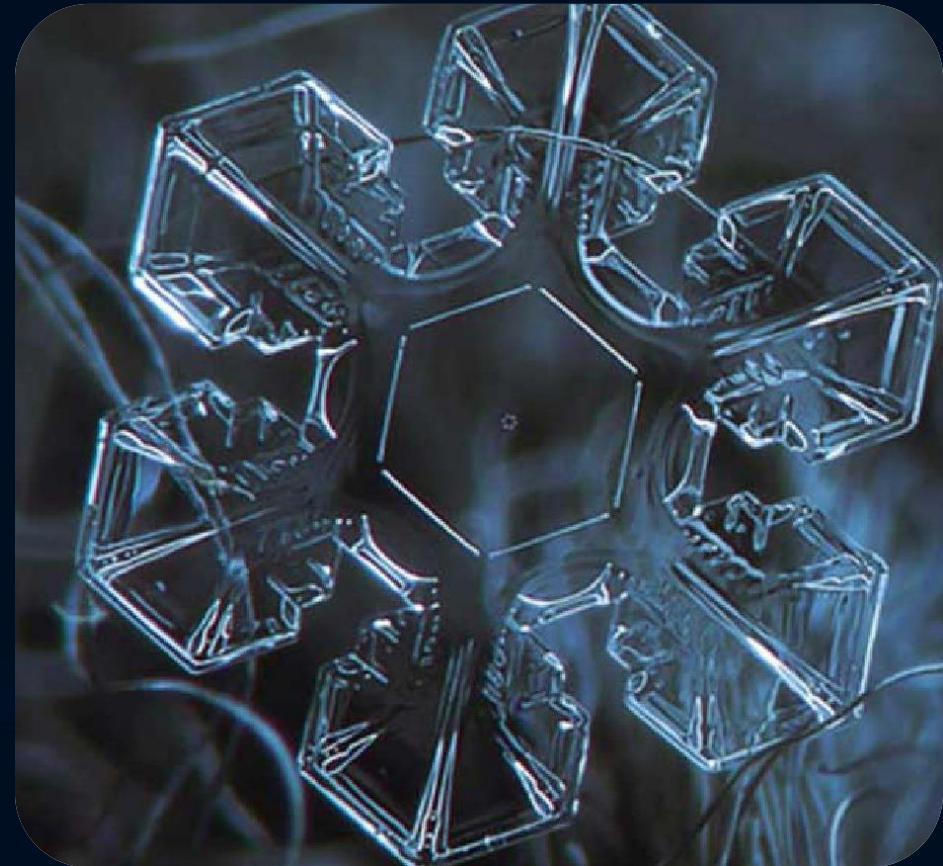

Saving the Planet by reducing Global water usage by 25%

# Did you know water has a wonderful geometric structure ?

Water in its natural state has a hexagonal structure which when consumed enables cells to perform optimally

**EcoH<sub>2</sub>O Water Enhancement –**  
“ Created by Nature, Perfected by Science ”

**EcoH<sub>2</sub>O**

# What about the water we use ?

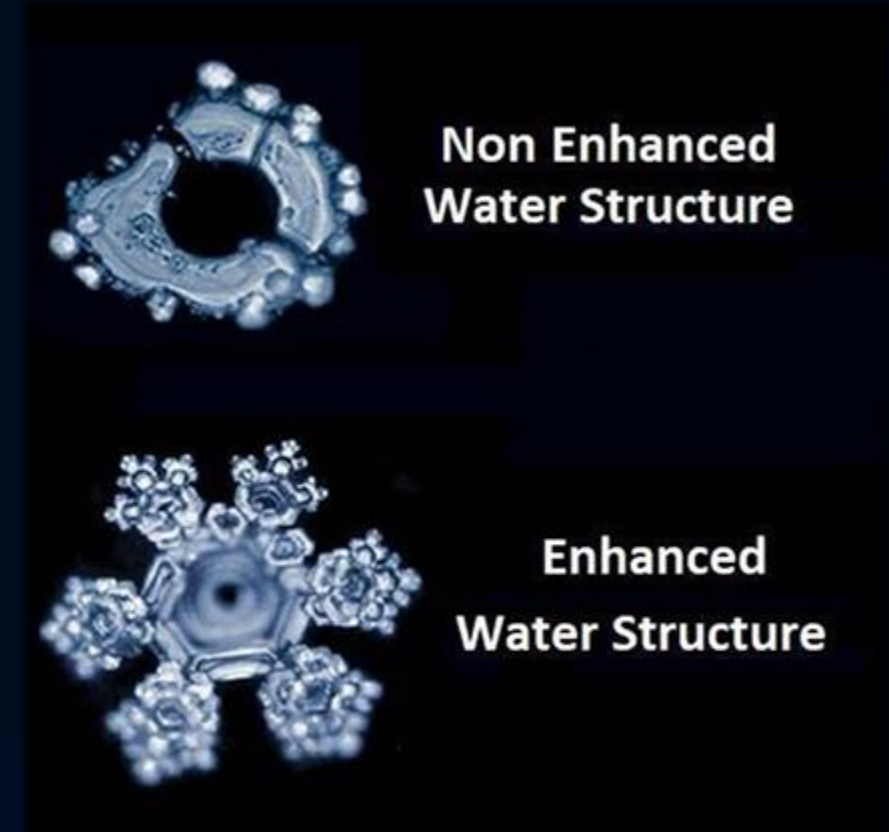

Water we use today is CORRUPT

- The water we use is in an unnatural and imbalanced state, both energetically and materially, it is deficient in life-enhancing minerals and polluted with life depleting material
- The molecular structure of water becomes disoriented and creates an imbalance, the methods used to provide safe drinking water are the major cause.
- Corrupted water is unhealthy, due to its molecular structure animals, plants, and human beings are not hydrated to their full potential
- Corrupted water is pH neutral; humans need slightly alkaline water to boost their metabolism
- Living tissues are not successfully hydrated reducing their effectiveness

# Enhanced Water is More Effective

- Enhanced and energized water can be defined as water in its natural balanced state, both actively and materially, however, cleansed of matter and energy that is not harmonious with nature
- At the molecular level, structured water has smaller geometric hexagonal structures which is easier for living cells to utilize
- Energized water has more oxygen, and this supports better oxidation of living cells
- Enhanced and energized water is slightly alkaline in nature as a result supports cellular growth

# EcoH2O

## Provides enhanced and energized water, naturally...

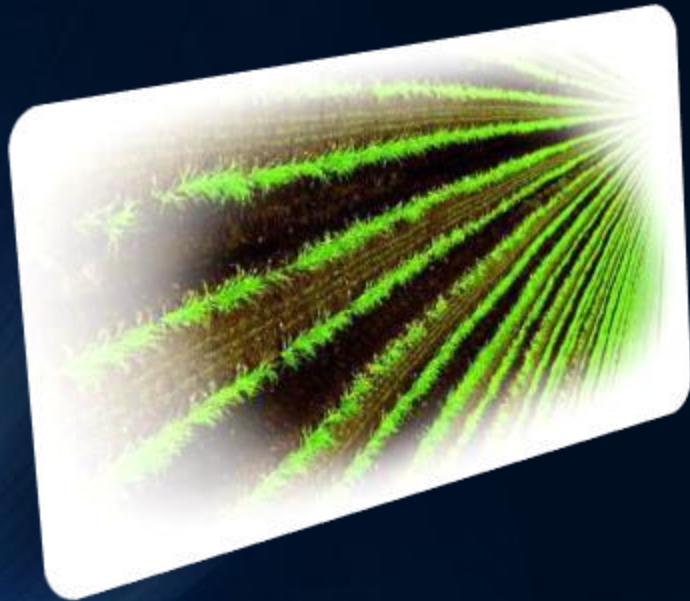

- We have perfected the science of enhancing water using rare minerals found in nature
- EcoH2O makes water more productive by increasing bioavailability to users
- Our system restructures water molecules into very small hexagonal clusters, each made up of six symmetrically organized molecules, while removing harmful elements like heavy metals, chlorine, fluorine, and sediment substances
- Our system was piloted on various crops and livestock in India, with amazing results
- We have designed our systems with ease of use in mind and no maintenance

# EcoH2O

## Benefits of EcoH<sub>2</sub>O Water Enhancement

- Increases bioavailability of water and nutrients to plants
- Increases seed germination
- Increases oxygen concentration
- Improves soil conditions

- Improves crop uniformity
- Improves plant vigor and quality
- Increases yields minimum 20 %
- Reduces disease in aquaculture industry
- Increases water absorption and retention in soil

## More benefits of EcoH2O Water Enhancement

- Increases shelf life of Yield
- Helps prevent hard water scale and corrosion
- Reduces friction in pumps and energy use
- Reduces water use 20% -30%
- Removes salinity in soil within first year
- Reduces total dissolved solids (TDS)
- Reduces disease in livestock and animal breeding
- Reduces need for fertilizers, pesticides, herbicides, insecticides

**EcoH2O**

# EcoH2O Water Enhancement System

- Very Simple System
- Easy to install
- No Maintenance
- Long Lasting
- Corrosion Free
- Non-Magnetic
- Comes in Various Sizes (2" to 16")

# Successfully Tested

Farming Produce

Dairy Farms

Horticulture

Agronomy

Aquaculture

Live Stock

## Benefits Realized – Agriculture

- Up to 50% increase in yield
  - Up to a 60% reduction of water requirements
  - Increased nutrients and sugars in the plants and the produce
  - Tastier & more nutrient rich Produce
  - Longer shelf life for your yield
  - Hardy plants that are more resistant to drought, heat and freezing conditions
  - Higher market price!
- 30% less fertilizer and pesticide
  - Healthier plants with 20 -40% increased biomass (bigger plants)
  - Less infection and disease in plants

## Benefits Realized – Livestock

- Better Feed To Weight Gain Ratios
- Chicks grew 10% faster and gain more weight
- Ready for market four days early
- Less mortality and less feed required
- Reduced Water Consumption
- Significantly Increased Profits
- Stimulated Beneficial Microbes Growth
- Reduction in feed required
- Reduced Antibiotic & Drug Use
- Improved Immunity
- Increased Temperature Extremes Tolerances

# Success Stories - Our Farmers

While EcoH2O has enabled many farmers to increase their crop yields while reducing their operating costs, more importantly it has improved the standard of living for these farmers.

## Success Story – Green Chilies

- Chili plants were greener and bloomed ten days ahead of the control plants
- Chili yields increased by 35% using Enhanced water
- Plants were healthier, more resistant to insects and disease
- Improvement in flavor and a spicier pepper, this resulted in attracting a better market price
- Shelf life increased

**With Out  
Enhanced water**

**With  
Enhanced water**

# Success Story – Tomato

- Enhanced water produced Vs Bore well water
- Enhanced and energized water gave tomatoes a thick outer skin and inside was soft and juicy.
- Increased shelf life

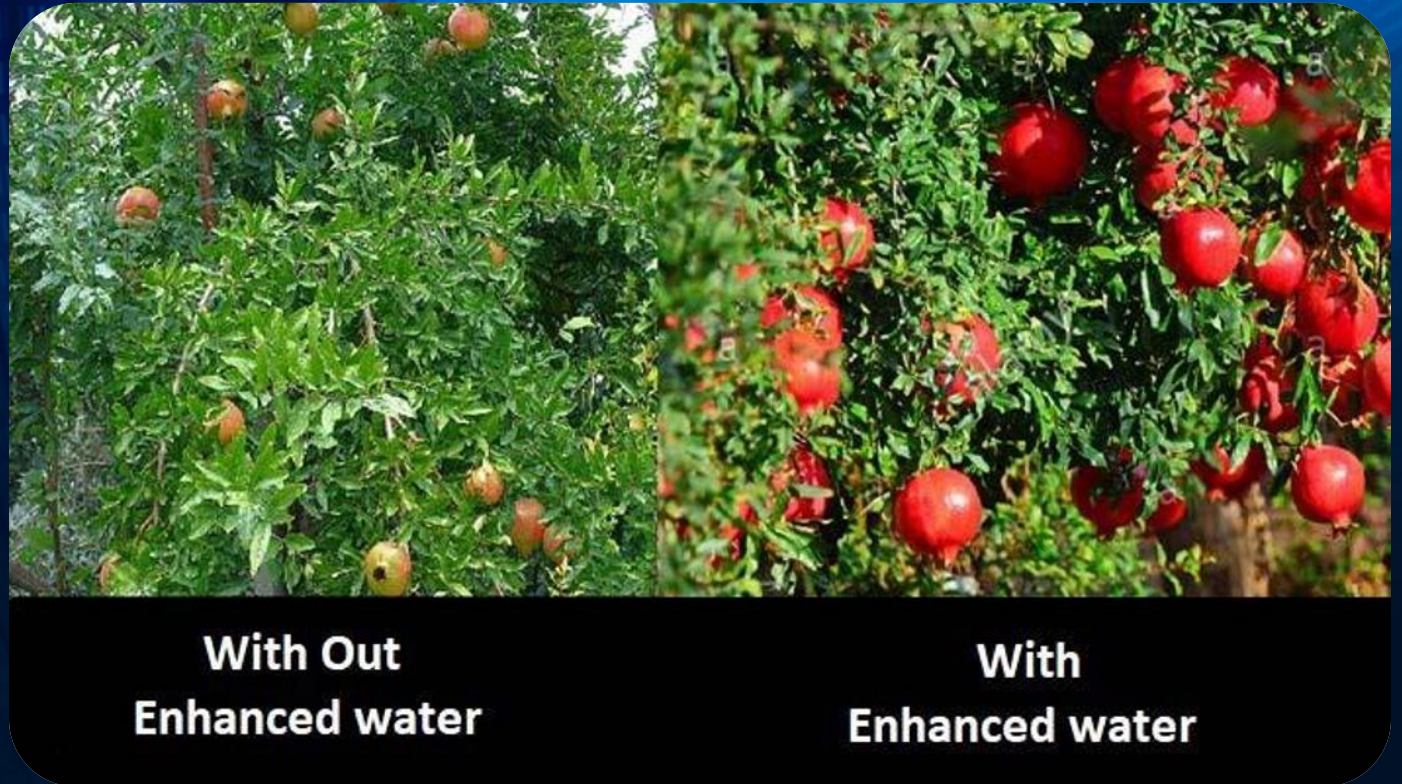

**With Out  
Enhanced water**

**With  
Enhanced water**

## Success Story – Pomegranate

- Pomegranates were larger and more nutrient rich
- Farming cost dropped over 30% while yield increased by 40%
- Shelf life, appearance, color, taste and size increased and improved
- We produced twice the tonnage with half the plants.
- Sunburn and spots are not observed when irrigated with Enhanced water.

## Success Story – Papaya

**With Out  
Enhanced water**

**With  
Enhanced water**

- The Enhanced water plants flowered faster with less flowers dropping
- The papaya plant looked healthier
- Fruit per plant improved tremendously, 36% increase in yield
- Plants had a significant increase in the stem size

## Success Story – Mango

- Mango trees irrigated with Enhanced water experienced fantastic growth and yield
- Fruits from these trees were bigger with outstanding quality with increased flavor and fragrance
- Because of the size and taste there was a huge demand and resulted in better price to the farmer.

# Success Story – Watermelon

- Watermelons irrigated with Enhanced water were sweet and juicy
- Melons were ready to harvest 8 days earlier than the control plant
- Less disease and were uniform in size (all are averaged 5 kg)
- Plants were very healthy, leaves were green, fresh and broad in size
- 30% increase in yield!

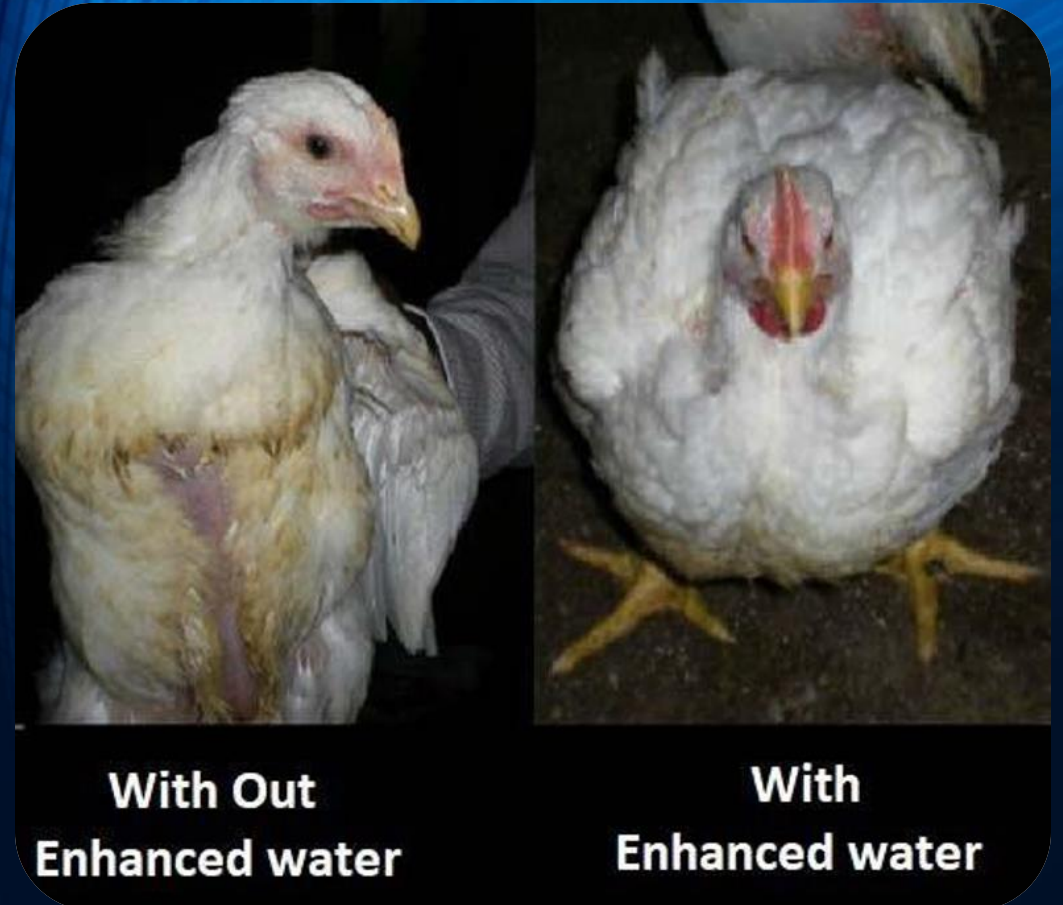

With Enhanced Water

## Success Story – Poultry Farm

- Average weight of birds were 2.75 kg in 46 days
- Food intake per chicken has come down from 1.94 kg to 1.63 kg
- Ammonia smell was eliminated from the chicken house
- Chicks grew 10% faster and gained more weight
- Ready for market four days earlier
- Healthier chickens with a decreased mortality rate
- Improved immunity levels

# Some Pilot Testing Sites:

- Pakistan - Rice
- India – Rice
- Bangladesh – Rice and Strawberries
- Spain – Tomatoes
- Saudi Arabia – Rice, Cucumbers and Papayas
- United Kingdom – Tomatoes
- Turkey – Bananas
- Nigeria – Potatoes and Cucumbers
- South Africa – Strawberries and Blueberries
- Costa Rica – Bananas
- Ecuador - Bananas
